

CHEROKEE CAMPUS SPARTANBURG TECHNICAL COLLEGE

Gaffney, South Carolina

SeamonWhiteside + Associates was commissioned to design a master plan for a new campus for Spartanburg Technical College. The Spartanburg Technical College Foundation and Freightliner partnered to create the new campus in the City of Gaffney, South Carolina. The project is located off Interstate 85 and S.C. Highway 11 and will be located behind the Peachoid water tank landmark.

The master plan includes a service and training facility for Freightliner, a city park, and a new campus for the college. The site has an existing pond, natural streams, densely wooded areas, and varied topography. The different uses for the parcel along with distinct site conditions helped shape and define the master plan. Great care was taken to maintain the natural beauty of the existing site. SW +A also provided the clients with preliminary infrastructure costs and civil engineering feasibility reports.
