Bon Secours St. Francis Hospital System in Greenville, South Carolina commissioned a 103,000 sq. ft. medical office building on the grounds of Millennium Campus; a research and corporate campus development located near the CU-ICAR campus. Millennium Campus requires all buildings that are located on the grounds to adhere to strict Design Review Committee guidelines for both the site and the structure. SeamonWhiteside + Associates provided master planning, landscape architecture, and civil engineering services for the project

as well as successfully obtaining the required permits and approvals.

The medical office building site includes design elements that are outside the usual plan for similar projects such as permeable pavers, public art, and public gathering spaces that are sprinkled throughout the site. Native plants were used in the landscape plan both for aesthetics and sustainability.

The facility is currently under construction and is anticipated to be complete in the summer of 2009. SW+A is providing construction administration services.
